

NRG Energy, Inc. Reports First Quarter 2007 Results; Increases 2007 EBITDA Guidance; and Announces Comprehensive Capital Allocation Plan

May 2, 2007

PRINCETON, N.J., May 02, 2007 (BUSINESS WIRE) -- NRG Energy, Inc. (NYSE:NRG):

First Quarter Financial Highlights:

- -- \$508 million of adjusted EBITDA, excluding mark-to-market (MtM) impacts;
- -- \$106 million of cash flow from operations, including \$120 million cash collateral outflow;
- -- Repurchased 1.5 million common shares for \$103 million; and
- -- Raising guidance for adjusted EBITDA from \$2,050 to \$2,150 million and cash flow from operations from \$1,359 to \$1,398 million.

Comprehensive Capital Allocation Plan:

- -- Two for one common stock split for holders of record as of May 22, 2007;
- -- Common share dividend of \$0.50 per share (adjusted for the stock split) planned for first quarter 2008;
- -- Continuation of remaining \$165 million of current share repurchase plan plus capacity for future common share buybacks;
- -- Senior credit agreement to be re-priced and amended; and
- -- Formation of an NRG holding company, to facilitate the ongoing return of capital to shareholders.

NRG Energy, Inc. (NYSE:NRG) today reported income from continuing operations for the three months ended March 31, 2007 of \$65 million or \$0.41 per diluted common share, compared to \$15 million or \$0.04 per diluted common share for the first quarter of last year. The 2007 improvement primarily resulted from the inclusion of three months of operating results for NRG Texas, which was acquired by NRG in February 2006, increased generation and pricing in the Northeast region, and \$107 million in after-tax refinancing expenses in 2006 associated with the acquisition of NRG Texas. MtM changes, primarily associated with economic hedges on our baseload assets, unfavorably impacted net income in 2007 by \$55 million while benefiting 2006 earnings by \$44 million.

Quarterly cash flow from operations of \$106 million was impacted by \$120 million of cash collateral outflows. First quarter 2006 adjusted operating cash flow of \$313 million benefited from \$230 million of collateral inflows. Operating cash flows, exclusive of collateral movements, increased by \$143 million versus the same period last year. This improvement reflects NRG Texas' contributions for the entire quarter in 2007. In addition, current year cash flow from operations benefited from \$39 million in higher contract prices that resulted from last November's hedge reset transaction.

"Over the past 3 1/2 years, our continuous focus on executing a multi-faceted growth plan off a foundation of strong commercial and plant operations has brought NRG to a much stronger place financially and strategically," said David Crane, NRG President and Chief Executive Officer. "NRG's operational effectiveness and the promise of our ongoing growth initiatives have put us in the position where we can both initiate a recurring cash dividend and generate the capital to reinvest in our business through RepoweringNRG and other core initiatives."

Regional Segment Review of Results

Table 1: Three Months Income from Continuing Operations and Adjusted EBITDA

(\$ in millions)	Income (Lo Continui Operatio before Ta	ing	Adjusted	EBITDA

Add: Prior Period MtM reversals				
(3)	56	(44)	56	(44)
Less: Hedge ineffectiveness (4)	44	(8)	44	(8)
Total net of MtM Impacts	212	(59)	508	295

(1) Includes interest and refinancing expenses of \$98 million and \$227 million for 2007 and 2006, respectively. Results in 2006 also include a \$67 million gain related to a settlement agreement.

(2) Represents a net domestic MtM loss of \$79 million in 2007 (primarily in the Northeast and Texas regions) and a net domestic MtM gain of \$37 million in 2006, primarily in the Northeast region.

(3) Represents the reversal of \$56 million in 2007 associated with the \$172 million net domestic MtM gains recognized in 2006 and reversal of \$44 million in 2006 associated with the \$119 million net domestic MtM losses recognized in 2005.

(4) NRG also hedges power prices using natural gas contracts. To the extent gas and power prices are not correlated, the ineffectiveness is included in the MtM results (primarily Texas).

MtM Impacts of Hedging and Trading Activities

The Company, in the normal course of business, enters into contracts to lock in forward prices for a significant portion of its expected power generation. Although these transactions are predominantly economic hedges of our baseload portfolio, a portion of these forward sales are not afforded hedge accounting treatment and the MtM change in value of these transactions is recorded to current period earnings. For the first quarter 2007, we recorded \$79 million of forward domestic net MtM loss representing the decrease in fair value of forward sales contracts of electricity and fuel, compared to a \$37 million net domestic MtM gain recorded in the first quarter 2006. The MtM impacts from hedging activities also included a \$44 million gain from hedge ineffectiveness related to the Company's Texas region due to a change in correlation between natural gas and power prices.

Texas: Operating results benefited from the full quarter in 2007 versus two months in 2006 as NRG Texas operations contributed \$51 million of pre-tax operating income and \$100 million of EBITDA in January 2007 alone. Improved operations and lower forced outage rates from the baseload fleet during the comparable period led to a \$39 million reduction in purchased power expenses during 2007. Current quarter EBITDA and cash flow from operations benefited \$39 million from the November 2006 hedge reset which increased contracted power prices.

Northeast: Quarter-over-quarter results for the Northeast, after adjusting for MtM impacts, achieved improvement in income from continuing operations and adjusted EBITDA, respectively. Increased demand and power prices were driven by more seasonable weather patterns that resulted in higher generation hours from our oil-fired peaking assets and baseload coal assets which led to a \$49 million, or 22%, increase in energy revenues. Capacity revenues for the three-month period increased 43% to \$83 million, reflecting higher capacity prices in the New York and Connecticut markets. Partially offsetting these improvements were higher than expected outage rates at certain units and lower sales of excess emission credits. Higher generation levels combined with a 59% decrease in SO(2) emission credit market prices led to the \$61 million decline in excess credit sales.

South Central: Income from continuing operations for the quarter declined by \$18 million in comparison to the region's strong performance in 2006. Increased demand from load serving customers combined with lower availability from the Big Cajun II coal plant reduced megawatts available for sale into the merchant energy market. Revenue from energy sold to contract customers increased by \$17 million, while merchant revenues declined by \$38 million. Reduced unit availability due to planned outages contributed to a 3% decline in generation. A new summer peak demand record was set in 2006 which reset and increased capacity payments.

West: Results for 2007 reflect the acquisition of Dynegy, Inc.'s 50% interest in West Coast Power (WCP), which closed on March 31, 2006. Regional operating results also improved as capacity revenues were favorably impacted by new tolling agreements executed by our Encina and El Segundo units after the acquisition date.

Thermal: Current year results included an \$18 million pre-tax gain from the January 2007 sale of our Red Bluff and Chowchilla, California generation assets.

Corporate: First quarter 2006 results included other income of \$67 million related to a settlement agreement reached with an equipment manufacturer associated with turbine purchase agreements from 1999 and 2001. Last year also included \$178 million of refinancing expenses associated with the Texas Genco acquisition.

Liquidity and Capital Resources

Table 2: Corporate Liquidity

(\$ in millions)	March 31,	December 31,	March 31,
	2007	2006(1)	2006(1)
Unrestricted Cash	655	795	818
Restricted Cash	49	44	67
Total Cash	704	839	885
Letter of Credit Availability	546	533	202
Revolver Availability	822	855	846

Total Current Liquid	lity \$2,07	\$2,227	\$1,933

(1) These amounts have not been restated for discontinued operations

Liquidity at March 31, 2007 was approximately \$2.1 billion, down \$155 million since December 31, 2006. The \$135 million cash decrease during the quarter resulted from \$106 million of cash from operations inclusive of \$120 million in collateral outflows and \$114 million used to fund seasonal movements in working capital. Investing activities included \$29 million in proceeds from the sale of Red Bluff and Chowchilla and \$107 million in capital expenditures. Financing activities included \$103 million in cash used for common share purchases, \$19 million in scheduled principal debt repayments and \$14 million in preferred dividend payments.

RepoweringNRG Update

Plants under Development

The originally planned RepoweringNRG development initiative continues on track. During the first quarter, a number of RepoweringNRG projects made progress in permitting, site planning and other critical development activities. However, some RepoweringNRG projects, including projects in Connecticut and in Delaware are less likely to move forward as they have not been successful to date in winning offtake mandates offered as part of requests for proposals sponsored by these states.

Plants under Construction

260 MW of repowered gas-fueled capacity at NRG's Long Beach Generating Station remains on schedule to be online by August 1, 2007 to support the anticipated summer peak on the Southern California Edison and California Independent System Operator systems. Total cash costs for the project are expected to be approximately \$73 million, with \$22 million of capital expenditures incurred during this year's first quarter. In addition to the Long Beach project, the Company is proceeding with the repowering project at the Cos Cob site in Connecticut. The project will add 40 megawatts of peaking capacity at a cash cost of \$18 million.

Development Expenses

During the first quarter 2007, NRG incurred approximately \$23 million in costs associated with our development efforts across all business units, but predominantly in Texas, to support the planned STP nuclear generating station expansion as we prepare to submit the combined operating license application to the Nuclear Regulatory Commission.

Comprehensive Capital Allocation Plan

With the successful implementation of its hedging strategy, the Company has created a strong and stable earnings and cash flow profile. As a result, the Company is pursuing a refinancing plan along with amendments to its Senior Credit facility to support and facilitate its capital allocation strategy. Under the planned refinancing, NRG will become a wholly owned operating company subsidiary ("Opco") of a newly created holding company ("Holdco"). Holdco will borrow up to \$1 billion from the Term B market and pay the net proceeds to Opco as an equity contribution. Opco will use the net proceeds for the prepayment of a portion of its existing Term B loan resulting in no change to the Company's consolidated debt levels. Upon completion, the restricted payments capacity under the Company's high yield bond indentures will increase by an amount equal to the equity contribution from Holdco to Opco.

Planned amendments to the Senior Credit Facility include a reduction in pricing, a \$150 million per year carve out enabling a recurring common share cash dividend, additional flexibility to invest in RepoweringNRG projects, and a commitment from the lenders to fund the Holdco loan. The Company has obtained commitments for the Holdco financing from a number of financial institutions.

Further, in order to provide additional liquidity to the Company's common stock, the Company's Board of Directors has approved a 2-for-1 stock split effected in the form of a stock dividend payable on May 31, 2007. The stock split will entitle each stockholder of record at the close of business on May 22, 2007, to receive one additional share for every common share held. The number of common shares outstanding upon completion of the stock split will be approximately 242 million shares, excluding the impact of any additional share repurchases which may be completed by the Company.

Contingent upon the successful implementation of the Holdco financing, which requires certain regulatory approvals, and sufficient cash resources the Company plans to commence an annual common share cash dividend of \$0.50 per share, paid quarterly beginning in the first quarter 2008. In addition to the cash dividend, the Company plans to continue with common share repurchase programs from time to time even after the completion of the current share buyback. In light of the Company's projected earnings and cash flow profile, the Company plans to target an annual return of capital to shareholders, consisting of both fixed (dividend) and variable (share repurchase) components, of approximately 3% per annum. In connection with the Company's previously announced share repurchase program, \$103 million of common share repurchases were completed during the first quarter 2007 at an average price of \$68.74 per share, leaving \$165 million of authorized repurchases to be completed. The Company expects to complete the remaining share repurchases in 2007.

"The Capital Allocation Plan announced today reflects steadfast confidence in our business model and our unwavering commitment to capital discipline," commented Robert C. Flexon, NRG's Executive Vice President and Chief Financial Officer. "All elements of our capital allocation philosophy--reinvestment, debt management, returning capital to shareholders, and RepoweringNRG--are covered by this plan."

Outlook

The Company is raising 2007 adjusted EBITDA guidance from \$2,050 million to \$2,150 million and cash flow from operations guidance from \$1,359 to \$1,398 million to reflect the first quarter performance, improving power prices and margins, and higher equity earnings due to the delay in the sale of Gladstone. Free cash flow guidance is being increased from \$879 million to \$893 million. Not all of the adjusted EBITDA guidance increase will flow through cash as a result of cash collateral outflows that increased as the Company posted \$25 million in cash to support hedges which settle primarily in 2008. In addition, funds used for working capital are projected to increase mainly due to voluntary pension funding in connection with recent pension legislation. Capital expenditure estimates increased \$18 million across the regions to support ongoing maintenance and by \$7 million in connection

with our Cos Cob, Connecticut repowering.

Earnings Conference Call

On May 2, 2007, NRG will host a conference call at 9:00 a.m. eastern to discuss these results. To access the live web cast and accompanying slide presentation, log on to NRG's website at http://www.nrgenergy.com and click on "Investors." To participate in the call, dial 866.584.6398. International callers should dial 416.849.9626. Participants should dial in or log on approximately five minutes prior to the scheduled start time.

The call will be available for replay shortly after completion of the live event on the "Investors" section of the NRG website.

About NRG

A Fortune 500 company, NRG Energy, Inc. owns and operates a diverse portfolio of power-generating facilities, primarily in Texas and the Northeast, South Central and West regions of the United States. Its operations include baseload, intermediate, peaking, and cogeneration and thermal energy production facilities. NRG also has ownership interests in generating facilities in Australia, Germany and Brazil.

Safe Harbor Disclosure

This news release contains forward-looking statements within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934. Such forward-looking statements are subject to certain risks, uncertainties and assumptions and include our adjusted EBITDA, cash flow from operations and free cash flow guidance, the timing and completion of RepoweringNRG projects, our Comprehensive Capital Allocation Plan, expected earnings, future growth and financial performance, and typically can be identified by the use of words such as "will," "expect," "estimate," "anticipate," "forecast," "plan," "believe" and similar terms. Although NRG believes that its expectations are reasonable, it can give no assurance that these expectations will prove to have been correct, and actual results may vary materially. Factors that could cause actual results to differ materially from those contemplated above include, among others, general economic conditions, hazards customary in the power industry, weather conditions, competition in wholesale power markets, the volatility of energy and fuel prices, failure of customers to perform under contracts, changes in the wholesale power markets, unanticipated outages at our generation facilities, adverse results in current and future litigation, the inability to implement value enhancing improvements to plant operations and companywide processes, and our ability to achieve the expected benefits and timing of our RepoweringNRG projects and our Comprehensive Capital Allocation Plan.

NRG undertakes no obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise. The adjusted EBITDA guidance and cash flow from operations are estimates as of today's date, May 2, 2007 and are based on assumptions believed to be reasonable as of this date. NRG expressly disclaims any current intention to update such guidance. The foregoing review of factors that could cause NRG's actual results to differ materially from those contemplated in the forward-looking statements included in this news release should be considered in connection with information regarding risks and uncertainties that may affect NRG's future results included in NRG's filings with the Securities and Exchange Commission at www.sec.gov.

The following table provides a reconciliation of cash flow from operations to adjusted cash flow from operations.

Q1	2006
Cash Flow from Operations	\$342
Reclassification of payment of financing element of acquired	
derivatives	(29)
Adjusted Cash Flow from Operations	\$313

EBITDA, adjusted EBITDA and adjusted net income are nonGAAP financial measures. These measurements are not recognized in accordance with GAAP and should not be viewed as an alternative to GAAP measures of performance. The presentation of adjusted EBITDA and adjusted net income should not be construed as an inference that NRG's future results will be unaffected by unusual or non-recurring items.

EBITDA represents net income before interest, taxes, depreciation and amortization. EBITDA is presented because NRG considers it an important supplemental measure of its performance and believes debt-holders frequently use EBITDA to analyze operating performance and debt service capacity. EBITDA has limitations as an analytical tool, and you should not consider it in isolation, or as a substitute for analysis of our operating results as reported under GAAP. Some of these limitations are:

-- EBITDA does not reflect cash expenditures, or future requirements for capital expenditures, or contractual commitments;

-- EBITDA does not reflect changes in, or cash requirements for, working capital needs;

-- EBITDA does not reflect the significant interest expense, or the cash requirements necessary to service interest or principal payments, on debts;

-- Although depreciation and amortization are non-cash charges, the assets being depreciated and amortized will often have to be replaced in the future, and EBITDA does not reflect any cash requirements for such replacements; and

-- Other companies in this industry may calculate EBITDA differently than NRG does, limiting its usefulness as a comparative measure.

Because of these limitations, EBITDA should not be considered as a measure of discretionary cash available to use to invest in the growth of NRG's business. NRG compensates for these limitations by relying primarily on our GAAP results and using EBITDA and adjusted EBITDA only supplementally. See the statements of cash flow included in the financial statements that are a part of this news release.

Adjusted EBITDA is presented as a further supplemental measure of operating performance. Adjusted EBITDA represents EBITDA adjusted for reorganization, restructuring, impairment and corporate relocation charges, discontinued operations, and write downs and gains or losses on the sales of equity method investments; factors which we do not consider indicative of future operating performance. The reader is encouraged to evaluate each adjustment and the reasons NRG considers it appropriate for supplemental analysis. As an analytical tool, adjusted EBITDA is subject to all of the limitations applicable to EBITDA. In addition, in evaluating adjusted EBITDA, the reader should be aware that in the future NRG may incur expenses similar to the adjustments in this news release.

Free cash flow is cash flow from operations less capital expenditures and preferred stock dividends and is used by NRG predominantly as a forecasting tool to estimate cash available for debt reduction and other capital allocation alternatives. The reader is encouraged to evaluate each adjustment and the reasons NRG considers it appropriate for supplemental analysis. Because we have mandatory debt service requirements (and other non-discretionary expenditures) investors should not rely on free cash flow as a measure of cash available for discretionary expenditures. In addition, in evaluating free cash flow, the reader should be aware that in the future NRG may incur expenses similar to the adjustments in this news release.
