

NRG Home's New Solar/Water Bundle Helps Residents More Efficiently Use Resources

April 16, 2015

Rachio Partnership to Bring Water Savings to Residential Solar Offering in Parts of California

SAN FRANCISCO--(BUSINESS WIRE)--Apr. 16, 2015-- Faced with the historic drought ravaging California, NRG Home today announced a new service plan that combines water conservation and solar energy into a single, smart consumer offering. The new smart watering/solar energy bundle includes a consultation with an NRG Home Solar specialist to determine how suitable a home is for solar, plus ways to help conserve water. The key technology behind the bundle is a smart irrigation controller from Rachio, Inc., a leading smart water home technology provider. The bundle launched initially in Fresno and San Diego and more areas of the state will be eligible for the package soon.

"We're committed to giving consumers energy-related products that help them be mindful and deliberate about resource management in a way that suits their needs and lifestyles," said Steve McBee, President and CEO of NRG Home. "This is an opportunity for us to stand by our customers and get them the products they need when they need them."

The Rachio solution is certified with the EPA's WaterSense program and eligible for rebates from many California water districts. The company's Iro controller connects to a homeowner's WiFi network and/or smartphone to reduce the water used for irrigation by an average of 30 percent.

NRG Home will also be offering turf replacement rebates as an additional option starting in May to incentivize California residents to consider sustainable, drought-resistant plants for homeowners who want to go beyond smart irrigation control and start replacing turf with less water-intensive plantings. Over time, additional conservation options are planned such as low-flow fixtures, water barrels and leak monitoring technology.

"In many ways this is a no-brainer," said Chris Klein, Rachio founder and CEO. "Our smart technology is a perfect fit for NRG Home's vision of giving consumers innovative sustainable offerings. That's especially true when you consider that up to half of California homes have irrigation systems, which use more water on average than any other residential end use."

"For so many people across America, solar is a statement that they are making positive energy choices at home," said Kelcy Pelger, Jr., President of NRG Home Solar. "Empowering water conservation — particularly in California — is the right thing to do and a natural complement to helping these customers build on their environmental commitment."

More information about the new bundle is available at <http://www.nrghomesolar.com/contact-us/get-a-quote/rachio/>.

About NRG Home

NRG Home is a leading consumer energy solutions provider, offering greater control over the creation and use of energy, both at home and on the go. It unifies more than three million customers through a growing portfolio of seamlessly integrated power products, including retail electricity, home solar systems and smart energy solutions that allow customers to generate, manage and share more of their own energy in ways that are clean, reliable and affordable. NRG Home is part of NRG Energy, Inc. (NYSE: NRG), a Fortune 250 company delivering cleaner and smarter energy choices.
